(Received June 23, 2011)

Abstract should state briefly the general aspects of the subject and the main conclusions. It should not contain equations. It is not part of the text and should be complete in itself: no table numbers, figure numbers or references should be given. Keywords below should be chosen as they best describe the contents of the paper. Each keyword, except proper nouns and acronyms, should be typed in lower-case letters and followed by a comma.

KEYWORDS: keyword1, keyword2, keyword3, . . .

1. Introduction

You can use this file as a template to prepare your manuscript for Supplement to the Journal of the Physical Society of Japan [1, 2].

Copy `jpsj-suppl.cls` and `cite.sty` onto an arbitrary directory under the `texmf` tree, for example, `$texmf/tex/latex/jpsj`. If you have already obtained `cite.sty`, you do not need to copy it.

Many useful commands for equations are available because `jpsj-suppl.cls` automatically loads the `amsmath` package. Please refer to reference books on \LaTeX for details on the `amsmath` package.

Please note that we have changed the format of Supplement from two-column layout to one-column. This means that the `twocolumn` option is not available any longer.

2. Another Section

2.1 Subsection

2.1.1 Subsubsection

Table I. Captions to tables and figures should be sentences.

AAA	BBB
CCC	DDD

2.1.2 Equation numbers

The `seceq` option resets the equation numbers at the start of each section.

Fig. 1. You can embed figures using the `\includegraphics` command. EPS is the only format that can be embedded. Basically, figures should appear where they are cited in the text. You do not need to separate figures from the main text when you use L^AT_EX for preparing your manuscript.

Label figures, tables, and equations appropriately using the `\label` command, and use the `\ref` command to cite them in the text as “as shown in Fig. `\ref{f1}`”. This automatically labels the numbers in numerical order.

The `minipage` environment can be used to place figures horizontally.

$$E = mc^2 \tag{1}$$

Appendix

Use the `\appendix` command if you need an appendix(es). The `\section` command should follow even though there is no title for the appendix (see above in the source of this file).

References

- [1] The abbreviation for JPSJ must be “J. Phys. Soc. Jpn.” in the reference list.
